Subject: Urgent Attention: Reports of Malicious Activity Targeting the DNS

ICANN issued an announcement (<https://www.icann.org/news/announcements>) regarding reports of malicious activity targeting the Domain Name System (DNS).

ICANN believes it is essential that members of the domain name industry, registries, registrars, resellers, and related others, take immediate proactive and precautionary measures, including implementing security best practices, to protect their systems, their customers' systems and information.

We encourage you to read the announcement, related reports, and previously published advice on security best practices from the Security and Stability Advisory Committee (SSAC).

If you have questions or confidential information to share, use the Naming Services portal or other channels you would typically use to share confidential information with ICANN.
