1. Accredited Registrar Status –

Table 1 displays the current number and status of the ICANN accredited registrars. The registrars are grouped into three categories:

Operational registrars: Those who have authorized access into the Sponsor's registry system for processing domain name registrations.

Registrars in the Ramp-up Period: Those who have received a password to access the dotCoop operational test and evaluation (OT&E) environment. The OT&E environment is provided to allow registrars to develop and test their systems with the dotCoop LLC registry system.

Registrars in the Pre-Ramp-up Period: Those who have been sent information by dotCoop, but have not yet executed the Registry Confidentiality Agreement and/or have not yet submitted a completed Registrar Information Sheet.

coop4.tladdns.net	2	3 hours, 1 minutes	99.595%

- The outages of our coop3 and coop4 servers were caused by a router failure. Here is a quote from the relevant correspondence with our account manager at Dynamic DNS:
 “The RFO we received from Telia, our provider for the Teleticity site, indicated that they had a card failure on one of their routers, which caused them to change some metrics to move traffic over, which they then forgot to change back after the card was replaced. As I understand it, everyone connected via that router/card was affected, not just us. DNS resolution should not have been impacted beyond some slight initial delays, as the other nameservers took the load as desired.
- The above data was collected by www.server-monitoring.co.uk.

3. gTLD Zone File Access Activity

Table 3 summarizes the zone file access activity for the current reporting month. As required by the ICANN/dotCoop Registry Agreements, the dotCoop Registry provides third parties bulk access to the zone files for the .coop TLD.

Table 3. gTLD Zone File Access Activity
