Section 1 – Accredited Registrar Status

Table 1 displays the current number and status of the ICANN accredited registrars. The registrars are grouped into three categories:

- 1.**Operational registrars:** Those who have authorized access into the system for processing domain name registrations.
- 2.**Registrars in the Ramp-up Period:** Those who have received a password to the PIR Operational Test and Evaluation (OT&E) environment. The OT&E environment is provided to allow registrars to develop and test their systems with the PIR Shared Registration System (SRS).
- 3.**Registrars in the Pre-Ramp-up Period:** Those who have been sent a welcome letter from PIR, but have not yet executed the Registry Confidentiality Agreement and/or have not yet submitted a completed Registrar Information Sheet.

Section 2 – Service Level Agreement Performance

Table 2 compares the SLA requirements with Actual Performance for the reporting month. As required by the ICANN/PIR Registry Agreement, PIR is committed to provide service levels as outlined in Appendix D of the agreement and to comply with the requirements of the SLA Appendix E of the agreement. The SLA is incorporated into the PIR Registry Registrar Agreement that is executed with all operational registrars.

Public Interest Registry Monthly Report – January 2004

Section 2 – Service Level Agreement Performance (continued)

During the month of January 2004, the ORG Registry encountered a significant change in the nature of DomainCheck transactions submitted by registrars to the registry. Certain registrars submitted large volumes of DomainCheck requests over a brief time period in an automated, duplicative and repeated manner so as to determine exactly when an ORG domain name had been deleted from the registry. Further, these registrars submitted six, seven, eight or more domains to be checked for each DomainCheck command submitted to the registry, effectively bundling domains to be checked. This combination of behaviors caused a Check Storm in the registry.

Heavy competition among registrars results in competition to be the first to add a newly dropped name, resulting in aggressive registrars who have configured their software to submit millions of bundled DomainCheck requests in the space of a few hours for a select set of domains. Although the volume of DomainCheck commands to the registry does not appear to be out of line with the volume from prior months, these commands are now concentrated over a brief time period and includes seven or eight names in each request, resulting in heavy bursts of peak loads to the registry.

This Check Storm behavior caused the registry's core systems to spend a majority of its resources responding to repetitive requests for the current state of a specific set of domains scheduled for deletion.

Due to the nesting (repetitive) DomainCheck commands submitted by registrars, the actual volume processed by the registry database (as distinct from a single payload EPP command which is reported in the ICANN reports) rose from over 7 million/day at the start of January to as many as 90 million/day at the end of January and in February.

There are three main categories of monthly transactions executed by Registrars via the Registry Registrar Protocol (RRP) with the SRS:

- 1. Write** – This category includes the following transactions: adding a new domain, deleting a domain, modifying a domain name record, renewing a domain, transferring a domain, adding a server, deleting a server, modifying a server record, adding a contact, deleting a contact and modifying a contact.
- 2. Query** – This category includes the following transactions: query a domain and query a server.
- 3. Check** – This category includes the following transactions: check a domain and check a server.

In compliance with Section 9 of Appendix T of the ICANN/PIR Registry Agreement, the tables that follow show the monthly growth trends in total domain name, name server and contact information transactions for each of these categories.
